

Before installing the star panel, building wooden frames is necessary.  
 Frame size Height: 2CM Width: 4CM  
 Distance between frames 60CM X 60CM  
 Height between frame and ceiling  $\geq 5\text{cm}$   
 Note: For a better effect, keep wooden frame as flat as possible (the flatness will directly affect the final installation effect) is necessary. Keeping a wider side ( $\geq 4\text{cm}$ ) of frame down can let the installation easier.

Connect wires of panel as the drawing. Fix the panel on the wooden frame by gun nail or glue.
